

The healthcare platform that brings doctors and patients together

Jameda's goal is to digitally connect patient and doctor simply, quickly and precisely. To this end, *Jameda* offers digital doctor-patient contact - from searching for the right doctor to online appointments and virtual visits to the doctor via video consultation. More than 6 million patients use these services every month. This makes *Jameda* Germany's largest doctor-patient portal.

The recommendations of other patients, the information provided by the doctors as well as extensive filter options help in the search for doctors. After a successful search for a doctor, patients can book their next appointment with numerous doctors on *Jameda* - for a personal physician attendance at the practice or a video consultation - completely simple 24/7 directly online. Doctors have the opportunity to present their practice on *Jameda* and provide comprehensive information about their range of services. In addition, they can optimize their appointment management with the *Jameda* appointment calendar and enable their patients to book an appointment online - even for video consultation. Around 275,000 doctors and other health professionals throughout Germany form the database. *Jameda* is a 100% subsidiary of Burda Digital GmbH.
